                                      Fusion peptide having G-CSF and with thrombopoietin activity - optionally chemically modified with a poly;alkylene glycol, used for
                                                                                                              composed of a peptide having human granulocyte colony stimulating factor (ho.CSF) activity fused with a peptide having thrombopoietin (TPO) activity, opt. via a spacer peptide. Peptides derived from these by deletion, insertion or substitution of one or more amino acid residues are included within the scope of the invention. The fusion peptides stimulate blood platelet and leukocyte production and are useful in the treatment of anaemia.
                                                                                                    The sequences given in AAT41786-88 encode fusion proteins which are

(TPO) activity, opt. via a spacer peptide. Peptides derived from these by deletion, insertion or substitution of one or more amino acid residues are included within the scope of the invention. The fusion peptides stimulate blood platelet and leukocyte production and are useful in the treatment of anaemia.
                                                                                                                                                                                                                                                                                                                                                       ATGGAGCTGACTGAATTGCTCCTCGTGGTCATGCTTCTCCTAACTGCAAGGCTAACGCTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         composed of a peptide having human granulocyte colony stimulating factor (hG-CSF) activity fused with a peptide having thrombopietin (TPO) activity, opt. via a spacer peptide. Peptides derived from these by deletion, insertion or substitution of one or more amino acid residues are included within the scope of the invention. The fusion peptides stimulate blood platelet and leukocyte production and are useful in the treatment of anaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequences given in AAT41786-88 encode fusion proteins which are

```

```
This sequence represents the coding sequence for a thrombopoietin (TPO) protein. TPO is a humoral factor capable of promoting platelet production. The encoded protein can be purified by using a gel affinity
                                                                                                                                                                                                                                                                                                                              Thrombopoietin; TPO; humoral factor; platelet; antibody; therapy; AIDS; thrombocytopenia; hypoplastic anaemia; thrombotic thombocytopenia; disseminated intravascular coagulation syndrome; ds.

column where Mp1 has been coupled to a resin. AA099551 and AA099553 also encode TPO proteins. The DNA sequences are inserted into vectors which are used to transform prokaryotic and eukaryotic host cells. Using the proteins encoded by these sequences, and derivatives of them, antibodies specifically immunoreactive with a TPO protein can be created. The antibodies, DNA sequences and vectors are used to isolate the protein sequences. The TPO proteins can then be used in the treatment of platelet disorders. These include thrombocytopenia, hypoplastic anaemia, AIDS, disseminated intravascular coagulation syndrome and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                            Stimulation of erythropoiesis using thrombopoietin and opt. erythropoietin - for the treatment of thrombocytopenia and anaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence encodes human thrombopoietin, which stimulates erythropoiesis to produce an increase in proliferation or differentiation of erythroid cells or to increase reticulocyte counts at least 2-fold over baseline reticulocyte counts and optionally, platelet levels to at least 20000/cu mm. The protein can be used in a composition, optionally with erythropoietin, for use in the treatment of thrombocytopenia and anaemia, such as that caused by destruction of haematopoietic cells in bone marrow, in the treatment of cancer with chemotherapy and radiation, and in pathological conditions such as myelodysplasia, AIDS, aplastic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CATGTCCTTCACAGCAGACTGAGCCAGTGCCCAGAGGTTCACCCTTTGCCTACACCTGTC

A cDNA clone (AAT34852) codes for human thrombopoietin (AAR98947), a protein that stimulates megakaryopoiesis and thrombocytopoiesis. The cDNA can be incorporated into an expression vector and utilised in the prodn. of low mol. wt. bioactive human thrombopoietin in eukaryotic (partic. yeast or mammalian) host cells. The recombinant

A cDNA clone (AAT37383) codes for human thrombopoietin (TPO) (AAW03512). It was isolated by PCR from human liver and kidney cDNA templates using primers (see also AAT37385-88) derived from exon sequences of a human genomic TPO clone (see also AAT37384) and from the conserved 5' untranslated sequence of mouse TPO cDNA (AAT37382). The cDNA can be used to produce recombinant mature TPO in transformed host cells. Purified, homogeneous TPO is obtd. that is suitable for therapeutic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

Bone marrow or peripheral blood stem cells are collected from the donor and administered to the recipient. The method is used for preparing cells for (bone marrow) transplantation and for stimulating or radiation therapy for e.g. breast cancer, leukaemia, lymphoma or radiation therapy for e.g. breast cancer, leukaemia, lymphoma or multiple myeloma. Treating the donor with TPO accelerates restoration of erythrocyte and thrombocyte levels in the patient after transplant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Increasing haematopoietic cells in patient - by admin. of stem cells from donor previously treated with thrombopoietin, used in patients who have received chemotherapy or radiation for cancer

```
This cDNA encodes a thrombopoietin (TPO) polypeptide. This can be used in the construction of a new expression vector replicable in a eukaryotic host cell encoding TPO polypeptides. The vector comprises a transcription promoter, a first DNA segment encoding a secretory leader, a second segment encoding a TPO polypeptide and a transcription terminator which are all operably linked. The second TPO segment consists of cerminator which are all operably linked. The second TPO segment consists of C.T.B. where C is a human TPO cytokine domain, X is a peptide bond or a linker consisting of one or two amino acid residues, such that X along in combination with C or B does not provide a dibasic amino acid pair and B is a polypeptide that can be selected from AAM$3125 to AAW$3126. The secretory leader is a S. cerevisiae alpha-factor secretory leader. B cultured yeast cell containing such an expression vector can be used to cultured yeast cell containing such an expression vector can be used to conjunct the TPO polypeptide can be used to increase proliferation of bone marrow cells for treatment of cytopenia, including those induced by aplastic anaemia, myelodisplastic syndromes, the characteristic containing the used to increase characteristic anaemia, myelodisplastic syndromes, the characteristic chara
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Erthyropoiesis may be stimulated in anaemic mammals by administration of thrombopoietin (TPO), and optionally erythropoietin (EPO). The anaemic mammal to be treated will have shown a haematocrit lavel less than 33 percent of total blood volume, a reticulocyte count of less than 0.8 percent and may have been treated with radiation or chemotherapy. The improved red blood cell level is due to an increase in red blood cell production rather than a decrease in red blood cell destruction. TPO proteins may be used therapeutically to increase proliferation of haematopoietic cells in the bone marrow, such as in the treatment of cytopenia or anaemia, especially associated with bone marrow failure, disorders associated with low red blood cell production, particularly when accompanied by thrombocytopenia and for increasing the level of circulating erythrocytes and erythrocyte precursor cells. TPO and EPO may be used for ex vivo expansion of marrow or peripheral blood progenitor cells.

Mpl ligand is synonymous with MGDF. Mpl ligands are mammalian megakaryocyte growth promoting and/or platelet producing factors. MGDF-2 is a truncated portion of MGDF-1. It is hypothesised that human MGDF is expressed in vivo as a substantially inactive or less active precursor polypeptide that contains variable C-terminal AAs. Upon cleavage of the C-terminal AAs (as well as the signal peptide), the processed form(s) of the molecule retain activity or become more active. It is believed that MGDF-1 may require processing in order to exhibit its activity. The fact that a truncated form MGDF-1 (i.e. MGDF-2) is active supports this hypothesis. Various active molecules that may result from truncations of the sequence set forth as (MGDF-1 (AAR80824) are given in AAR80822, AAR80825, AAR80825. AAR80825 are any of those that have C-terminal truncation variants of MGDF-1 are any of those that have C-terminal truncations from AAR80825.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

concerns analogues of mpl ligand which have altered glycosylation patterns. Alteration of glycosylation of mpl ligand can cause improved biological activity. The mutated protains comprise a lower sialic acid content than wild type mpl ligand. Compositions comprising the mpl ligand analogues of the invention may be used to treat diseases involving an existing or expected megakaryocyte/platelet deficiency, i.e. in thrombocytopaenia.
                                                                                                                                                           36

/note="Organ: Kidney/Brain; Vector: pBACe3.6; Site_1:
Cool; Site_2: EcoH; Femala C57Bi_65 mouse kidney and/or
brain genomic DNA was isolated and partially digested
with a combination of EcoRI and EcoRI Methylase. Size
selected DNA was cloned into the pBACe3.6 vector at the
ECORI sites. The ligation products were transformed into
DH10B electrocompetent cells (BRL Life Technologies).

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gal electrophoresis. Vector DNA was prepared from a derivative of pWDA2 (gil4732114) gblAR129072.1), a copy.number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gil473214 glp.H22072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampiciallin resistance."

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo osogawa and haron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, Wr. The library is named RRCI-98 and was constructed by partial ECORI digestion of Drosophila BNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the pDGP's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                       US-09-680-514-6
